

## **ABSTRACT**

### **Cosmetic composition of water-in-water emulsion type based on surfactants and cationic polymers**

The present invention relates to a cosmetic composition of water-in-water emulsion type comprising, in a cosmetically acceptable aqueous medium:

at least one surfactant,

at least 2.25% by weight, relative to the total weight of the composition, of at least one water-soluble salt,

at least 0.5% by weight, relative to the total weight of the composition, of at least one cationic polymer with a weight-average molecular mass of greater than  $10^5$ ,

in a water-soluble salt(s)/cationic polymer(s) weight ratio of greater than 4.5.

The invention also relates to the use of this composition for washing and conditioning keratin materials, and in particular the hair.

No figures.
